EDUCATION

Game Programming Advanced Diploma

George Brown College
2024- 2026

SKILLS

- Python (OOP, scripting, automation, data processing)
- C++ (OOP, Unreal Engine 5 and 4)
- C# (Unity-based system dev)
- Data structure and algorithm
- AWS cloud computing
- Git, GitHub
- System Design, Problem solving
- SQL(queries, joins, data validation)
- Microsoft Office (Word, Excel)

LANGUAGE

- English - Native
- French- Intermediate

ABOUT ME

Software Engineering student with hands-on experience in Python, C++, and C#, focused on quality assurance, testing, and automation of complex systems. Strong background in debugging, validating logic, and improving system reliability through structured testing and data-driven analysis. Experienced in collaborative development environments, test-driven iteration, and documenting results across Unity and Unreal Engine projects.

INTERNSHIP EXPERIENCE

● Game Programmer Intern

Student Association at George Brown College| June 2025 - Present

- Developed AI-based systems using structured decision logic
- Applied data structures and algorithms to gameplay systems
- Collaborated in iterative development and testing cycles

EXPERIENCE

● Restaurant clerk and cashier

Shah's Halal Food | March 2024 - Present

- Responsible for doing cash registration, cooking and serving customers
- Contributed to a smooth dining experience.

● Resident Advisor

Campus Living Centers | August 2024 - April 2025

- Plan and organize different events to foster community engagement
- Act as a point of communication with the residents and managers
- Documented issues, followed defined procedures, and communicated clearly with stakeholders to resolve problems efficiently
- Attending weekly meetings and collaboration with teammates

PROJECTS & TECHNICAL EXPERIENCE

● Data Structures & Algorithmic Systems (Python)

- Implemented core data structures (stacks, queues, dynamic arrays) using object-oriented design
- Created test cases to validate correctness of data structures under edge conditions and varying workloads

https://github.com/Kouroshca/Task_Scheduler

● Threat Intelligence tool (Python)

- Built a Threat Intelligence Analyzer in Python to assess suspicious messages by extracting Indicators of Compromise (IOCs) such as URLs, emails, and phone numbers.
- Developed an interactive web interface using Streamlit, enabling real-time analysis and reporting of potential security threats.
